welcome...

to the future of lift control equipment.

Based in North Wales, Artisan Lift Control Equipment specialise in the design, manufacture and supply of lift components to organisations of any size across the UK.

At Artisan we pride ourselves on the fact that the entire workforce is involved in the design, testing, research & development, dispatch, marketing & sales of all products. For example, the technical staff are actively engaged in the sale and marketing of products and this interaction enables clients to discuss their needs with a fully qualified staff member, which in turn ensures total customer satisfaction.

By outsourcing a number of tasks to local specialist companies Artisan ensure that each component is tailor made to suit the needs of our client. For example, a local specialist may undertake circuit board assembly together with metalwork and enclosure design. By working in this way, we aim to continue designing, manufacturing and providing all control and communication equipment to suppliers at a cost effective rate whilst also ensuring excellent customer service and bespoke technical support.

Through continuous research & development Artisan Lift Control Equipment have remained at the forefront of lift technology – and that is where we strive to remain.

Remote Lift Monitoring Software

Click above for a full demo of Artisans' unique software, which enables users to monitor lift performance and schedule preventative maintenance without leaving the office.
